

21st Century Tools for 21st Century Students

Green Allowance at School

At Green Allowance, kids take on energy-saving tasks at home, and parents share the resulting savings as an "allowance." Schools can get involved by using Green Allowance's tools for schools, which include:

- *Interactive multimedia classroom materials for students in grades 4-8*
- *Standards correlations in participating states*
- *Support for creating school teams that can compete with other schools*

Parents save on energy bills, kids make money, and schools get new tools for teaching and learning. Everyone wins, including the planet.

Flexible Approaches

You decide how to use Green Allowance at school. You can do any or all of the following:

- *Use the in-class activities to introduce concepts around global climate change*
- *Send students to the site to learn about saving energy*
- *Start a school team*

Most schools spend just an hour or two introducing the program, then let students continue on their own, either as individuals or a school team. You can make your experience as simple or involved as you like.

No Cost to Schools

There is no cost for using the site or classroom materials. Anyone can use the site, and if your electric utility is partnered with Green Allowance, you'll enjoy increased functionality.

Safe and Secure

Green Allowance provides a safe, secure environment for kids to learn about how their home energy use connects to the health of the environment. The site is interactive and easy to use for both experienced web users and kids who are just building their technology skills.

Building Skills

Together, the site and its educational materials help students build skills in:

- *Math*
- *Science*
- *Using technology*
- *Cooperative learning*
- *Real-world problem solving*

Involving Families

Green Allowance also offers a unique opportunity to involve parents at a new level. Students and parents work together to save energy, and share the savings. Both students and parents have an incentive to stay involved.

It's Time for Green Allowance

Climate change is a 21st century problem that requires 21st century solutions. Green Allowance gives schools the tools they need to help students understand this new challenge, and start making a difference in ways that are educational, fun, and rewarding.
